EDUCATION

BS Theoretical Physics
Univ. of California at Riverside
1999 - 2004
Riverside, CA

MSc Audio Acoustics
Salford University
2005 - 2007
Manchester, England

Dev Bootcamp
Summer 2013
San Francisco, CA

PROFILE

My objective is to find a company whose goals and products provide an immediate utility to it's users and potential new customers. I would love to join such a team to build out intuitive interfaces and work towards expanding their customer base.

EXPERIENCE

Tumblr / Front End Developer

November 2016 - Current

I worked on the commenting system (Notes & Activities team) for Tumblr's web platform. During my time a complete re-write of the web client was undertaken and I rebuilt the notes interface in ReactJS and Typescript with 100% test coverage using Enzyme and Jest.

Sincerely Inc. / Full Stack Developer

May 2014 - November 2016

I rewrote Sincerely's entire Admin system as a web client using AngularJS and Grunt. During this time I began working with PHP to build out API endpoints needed for the Admin client to interface with. I also rebuilt the Sincerely.com web page as a web client using AngularJS.

50Cubes / Junior Developer

October 2013 - April 2014

I used the MEAN stack to create Wardrobe.me, a social network focused on fashion and clothing. Various ideas were prototyped and built out for the site including quiz games that focused on clothing and brands and a reward system using online coupons.

PREVIOUS LIFE

Prior to Web Development I was an acoustic consultant for 6 years in San Francisco. I spent a lot of time measuring noise, crunching data using Excel VBA scripts, and writing reports.
