MYSQL

EDUCATION

BS Theoretical Physics
Univ. of California at Riverside
1999 - 2004
Riverside, CA

MSc Audio Acoustics
Salford University
2005 - 2007
Manchester, England

Dev Bootcamp
Summer 2013
San Francisco, CA

My experience as a developer has had me learning at least one new technology per year. Ruby was my initial language of choice and as I was becoming proficient in Rails I soon found myself on a project using AngularJS. While I delved deeper into Angular and single page applications I found myself on a project using PHP and MySQL. Currently I am involved in projects using React + Typescript and writing test coverage with Jest and Enzyme.

The rotation of languages and technologies year over year is part of the job, and I'm comfortable knowing that there will be more to come in the years ahead.

EXPERIENCE

Tumblr / Front End Developer

November 2016 - Current

I worked on the commenting system (Notes & Activities team) for Tumblr's web platform. During my time a complete re-write of the web client was undertaken and I rebuilt the notes interface in ReactJS and Typescript with 100% test coverage using Enzyme and Jest.

Sincerely Inc. / Full Stack Developer

May 2014 - November 2016

I rewrote Sincerely's internal Admin system as a web client using AngularJS and Grunt. During this time I began working with PHP to build out API endpoints needed for the Admin client to interface with. My backend work also included MySQL database management including writing migrations and querying the database directly. My final project was rebuiling Sincerely.com as a web client using AngularJS.

50Cubes / Junior Developer

October 2013 - April 2014

I used the MEAN stack to create Wardrobe.me, a social network focused on fashion and clothing. Various ideas were prototyped and built out for the site including quiz games that focused on clothing and brands and a reward system using online coupons.

PREVIOUS LIFE

Prior to Web Development I was an acoustic consultant for 6 years in San Francisco. I spent a lot of time measuring noise, crunching data using Excel VBA scripts, and writing reports.
